

Pull-N-Pak® Compostable Produce Bag System

Enhance your customer's experience and help the environment with the Pull-N-Pak Compostable Produce Bag System. With this innovative dispenser and bag design your customers will get one-handed dispensing of a single, pre-opened bag, every time, down to the last bag on the roll. Not only does this reduce customer frustration but it also decreases bag waste by up to 20%.

The dispensers are compact in design and can be mounted to a wall, shelf or free standing base. The large capacity 15 x 20" bags are static-free so they stay open and their wide-opening makes it easier to load large wet items. Their patented star-sealed bottom is stronger than any other seal on the market and provides a leak proof, concave shape to create a flat bottom.

Made from Mater-Bi®, a GMO-free bioplastic made from rapeseed oil, sunflower oil and vegetable starch (over 50%) and fossil polymer. These bags are a natural, compostable alternative to polyethylene-based plastic bags. Great for produce, bulk foods, meat and bakery items.

These bags are only available with custom printing. Minimum order is 180 cases, each case contains 1920 bags (6 rolls of 320).

The market leader and proven bagging solution for produce, meat, bakery, and bulk.

- One-handed, single bag dispensing
- Pre-opened bags
- Easy load wide-opening
- Large capacity
- Static-free
- Star-sealed bottom
- Custom printed
- Certified Compostable
